

Missing value conventions

- 9 Could not be constructed, because the question had not been asked or the component variables were not held on the dataset.
 - 8 Missing or invalid data
 - 7 Not applicable, e.g. work hours for non-working respondents
- Two additional missing values were constructed to flag unusual filtering of economic activity questions.
- 4 Respondents with 0 work hours in 1965-66 included some respondents with less than 10 hours of work. -4 is used therefore instead of -7 for respondents who did no paid work..
 - 3 In 1992-94, only people recording no work hours were asked some questions. -3 flags cases where people were not asked this question.
